

Handbuilding Class

May 3, 2018 - June 21, 2018

10am - 12pm

8 week class

You don't have to know how to use a wheel to make pottery ... try handbuilding! In this 8 week classes you will learn how to make both functional and sculptural pieces using slabs, coils and pinch pots. You will learn how to roll slabs using a slab roller and how to make coils using a hand held extruder. We will play with plaster and wood molds too. If you ever wanted to make pottery without the wheel here is your chance!

Each class meets for 2 hours every Thursday from 10am - 12pm. We will be using Georgies G-Mix 6 clay body and Georgies cone 6 glazes. There will be weekly demonstrations, which includes how to brush glazes and other glazing techniques. The class fee includes firing and all materials. You will also have access to the classroom during designated times when another class is not scheduled.
