

DUNCAN CRYSTAL GLAZES

Quantity discounts apply on multiples of the same item

Crystal Glazes are magical potions in jars!

All Duncan crystal glazes are nontoxic and lead-free. However, they should not be used inside food or drink containers because of their fired surface characteristics and possible crazing. Only CR905, CR906, CR909 and CR910 should be considered foodsafe.

(= No pints available)

The contrasting colors in Crystal Glazes come from color pigment chips in the glaze, settle to the bottom of the jar. Stirring thoroughly is a MUST. Pour the glaze into a separate dish or bowl if it will help you stir it up well. If you wish, you can pick out the largest chips and apply them to the surface of the wet glaze, by hand, where you want them. Handle pieces with crystal glazes carefully before firing: the color chips can be brushed off easily.

Color Burst Crystal Chips

Duncan Color Burst Crystal Chips are available in a popular array of colors and various sized chips. The Crystal Chips can be mixed with any of your favorite glazes or placed where desired when the glaze is wet to create one-of-a-kind pieces with vibrant bursts of color. Crystal chips will react differently in the firing process depending on what glaze you pair them with, burst size, or amount of flow. Non-toxic and safe for use on food containers when properly applied and fired to cone 06 to cone 6.
