

Shimpo SR3050: A Heavy Duty Machine

Shimpo's slab roller can produce slabs up to 3 inches thick. The two-roller system evenly distributes pressure on the slab to reduce warping. Dual hand wheels and a thickness indicator provide synchronized fine adjustment and allow you to precisely control the thickness of the slab. The wagon wheel handle provides effortless feeding of clay through the rollers in either direction. The tabletop is 30 x 50 inches, and the table's height is 36".

SR3050 Slab Roller \$895.00

SlabMat

The smooth alternative to canvas: a nonwoven material for pressing slabs without the textured weave of canvas.

• For more ideas about surface and texture...

visit: georgies.com/mat •

- The manufacturer recommends using a blunt steel fettling knife for cutting clay directly on the mat.
- Use cornstarch as a release powder if you find that your clay sticks. Use separate pieces for different colors of clay to avoid contamination.
- For slabs longer than 23" on a slab roller, use two full-length sheets with the clay sandwiched between them.
- To cut SlabMat, use an Exacto or utility knife.
- Store SlabMats flat or loosely rolled (at most).
- You can use SlabMat on one side of the clay and canvas on the other for slabs with smooth and textured sides.
