

Speedball Underglazes fire consistently true, and are unmatched in vibrancy and value. Originally formulated to perform in a wide firing range (cone 05-6), these Underglazes have been successfully fired at Cone 10. Suitable for use on greenware or bisque, each color produces a soft, velvety finish when left unglazed, and intensifies in richness when covered with a clear glaze.

Speedball Underglazes are formulated to be a far thicker, concentrated consistency than competitive brands. This allows artists the chance to easily adjust using water to the desired workability and extend the amount of product available in every jar, oftentimes doubling or tripling the quantity available and delivering an even more superior value to your studio. Even better, the bold, eye-catching color of these Underglazes won't be compromised, no matter how much you thin the product, making for a happy kiln opening and studio budget every time!

We offer 20% off the 2oz or Pint prices if you buy 6+ of the same item number and size.
