

**Speedball Mid-Fire Glazes** ... are an artist-led project developed in partnership with ceramic artist, Nancy Sowder, highlighting how artists shape Speedball's development. This line consists of 30 glazes that create magical mottling and reduction like effects fired at cone 5/6. Get eye-catching results when using each glaze on their own, or try layering colors for even more unique variation! We recommend that you use a normal cooling cycle across all colors to ensure consistent results. All colors are fired on Laguna B-Mix clays at cone 6. Sold in Pints only.

SB2100 .....Blue Tiger's Eye ..... \$18.00	SB2116 .....Hematite ..... \$18.00
SB2101 .....Blackened Copper (*kit color)..... \$18.00	SB2117 .....Storied Sage ..... \$18.00
SB2102 .....Blushing White ..... \$26.00	SB2118 .....Buttermilk (*kit color)..... \$16.00
SB2103 .....Dragon Stone ..... \$26.00	SB2119 .....Champagne Quartz (*kit color)..... \$16.00
SB2104 .....Teal Agate (*kit color)..... \$16.00	SB2120 .....Coriander ..... \$16.00
SB2105 .....Blue Topaz ..... \$18.00	SB2121 .....Prussian Jade ..... \$18.00
SB2106 .....Blue Moss (*kit color)..... \$18.00	SB2123 .....Ethereal Blue (*kit color)..... \$18.00
SB2107 .....Lavender Mist ..... \$18.00	SB2124 .....Midnight Plum ..... \$26.00
SB2109 .....Wisteria (*kit color)..... \$16.00	SB2125 .....Jasper (*kit color) ..... \$18.00
SB2110 .....Variegated Lapis (*kit color) ..... \$18.00	SB2126 .....Nightshade (*kit color) ..... \$16.00

SB2113 .....Gossamer Drift (*kit color)..... \$16.00	SB2129 .....Orange Creamsicle ..... \$26.00
SB2114 .....Smoke ..... \$16.00	SB2130 .....Raspberry Fizz ..... \$26.00
SB2115 .....Blackcurrant..... \$26.00	SB2131 .....Living Coral ..... \$26.00

## Amaco Cosmos Glazes

...A cone 5/6 glaze line that capture the mesmerizing beauty of crystalline glazes and will transform your pottery into celestial masterpieces that sparkle with the brilliance of distant galaxies. Are they Food Safe? Yes, but due to durability, these glazes are not recommended for food surfaces. These glazes can be fired in a normal medium-speed firing with no special cooling schedule required. To take this glaze to the next level, use a controlled cooling schedule for increased crystal growth using the schedules below.

Cone 5 = 2201 °F (at 270 °F/hour in the final 200 °F of firing) / 1184 °C (at 150 °C/hour for the final 100 °C of firing)

Cone 6 = 2266 °F (at 270 °F/hour in the final 200 °F of firing) / 1241 °C (at 150 °C/hour for the final 100 °C of firing)

C06 ..... Supernova..... Pint ..... \$36.00
C07 ..... Solar Flare ..... Pint ..... \$36.00
C08 ..... Dark Star..... Pint ..... \$36.00
C013 ..... Mars Crystal..... Pint ..... \$36.00
C014 ..... Solar Rainbow ..... Pint ..... \$36.00
