AIR DRY CLAYS SELF-HARDENING

Marbled, and its Terra Cotta counterpart Mexican Pottery clay, are moist and ready to use for anything from sculpting to wheelthrowing. Knead them to increase their plasticity before use. Allow your finished pieces to dry slowly and evenly on all sides at room temperature, and away from heat, until hard. When completely dry, finished pieces are durable - but NOT waterproof. After decorating, it's a good idea to coat them with a shellac or varnish to seal it and make your piece water-resistant.

- DO NOT FIRE & NEVER USE FOR FUNCTIONAL WARE -

MAGIC-SCULPT

Magic-Sculpt is a two-part resin putty useful for repairs and small, detailed objects or accessories where clay is too fragile. Knead together equal amounts of the two components and begin working: stuff and smooth it into cracks or rough out your desired shape. When Magic-Sculpt sets, it can be sanded, cut, drilled or carved. Magic-Sculpt is a neutral color and accepts paint.

NSP (Sulfur Free)

NSP is a sulfur-free, somewhat stiffer, waxier, sculpting Plasteline often used for product prototypes. It works well with most molding materials. It can be melted and poured at approximately 185° F. To melt and pour, do not use direct flame. You can place on a burner at a very low temperature or use a double boiler for best results. Once molten, brush onto cores to quickly build up to desired thickness.
