

Color Play - What is your Color Way?

How should I glaze this?
What Color? What Texture?

Color: Described by three characteristics: Hue, Value, and Intensity.

Hue: The color name; Red, Blue, Yellow, etc.

Value: The relative lightness or darkness of a color
(referring to the gray scale).

Intensity: Purity and color saturation, bright or dull.

Tint: Color + White.

Tone: Color + Gray.

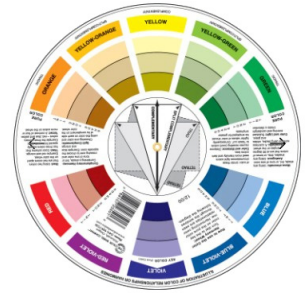

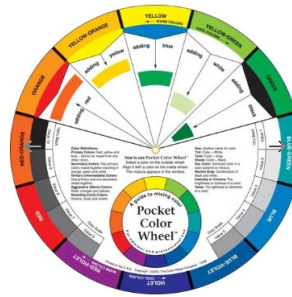

Shade: Color + Black.

Primary Colors: Red, Yellow, Blue.

Secondary Color: Orange, Green, Violet
(made by mixing two primary colors).

Warm Colors: Red, Orange, Yellow.

Cool Colors: Blue, Green, Violet.

Harmonious Color Schemes:

Monochromatic: Using any tint, shade, or tone of just one color.

Analogous: Colors that are adjacent to each other on the color wheel.

Complimentary: Colors directly opposite on the color wheel.

Ceramic colors are influenced by the chemistry of the glaze and the clay body used. We used our G Mix 6, a mid-range off-white clay body, but try a darker clay and see what happens!

Color has more options:

Split Complement: Using any color with 2 colors on each side of its direct opposite (its complement) on the wheel.

Triad: Using 3 colors equally spaced from each other on the color wheel.

Tetrad: Using a combination of 4 colors on the wheel that are 2 sets of compliments.

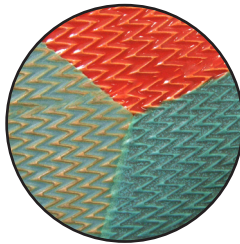

Key Color: The predominant color in a color scheme.

Seeing these colors side by side, or triads, it's easy to see when a color is dominant or recessive - helping to select it's place on your ceramic work.

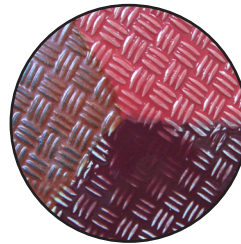

This exercise in color began using our glazes that were new at the time and then grew to include existing glazes. This is only a beginning, and there is so much more to explore! We have added a Tie-Dye line and a Satin line that also work well with these glazes. Our Interactive Pigment glazes add another opportunity to find new color combinations and depth to your work.
